

Your touch to the World...

Company profile:

Telecom International & Space Consultancy (TISC) wants to bring people and business closer together via the means of quick and reliable satellite communications. TISC is focused on serving its customers; to deliver maximum content and tailor made solutions. TISC is an international company founded in Leiden, Netherlands in 1994. The core business consists of Satellite: Inmarsat (**Bgan, Fleet, Isatphone**), VSAT, Iridium, and non satellite Wireless (GSM, CDMA, WiFi and WiMax) communications.

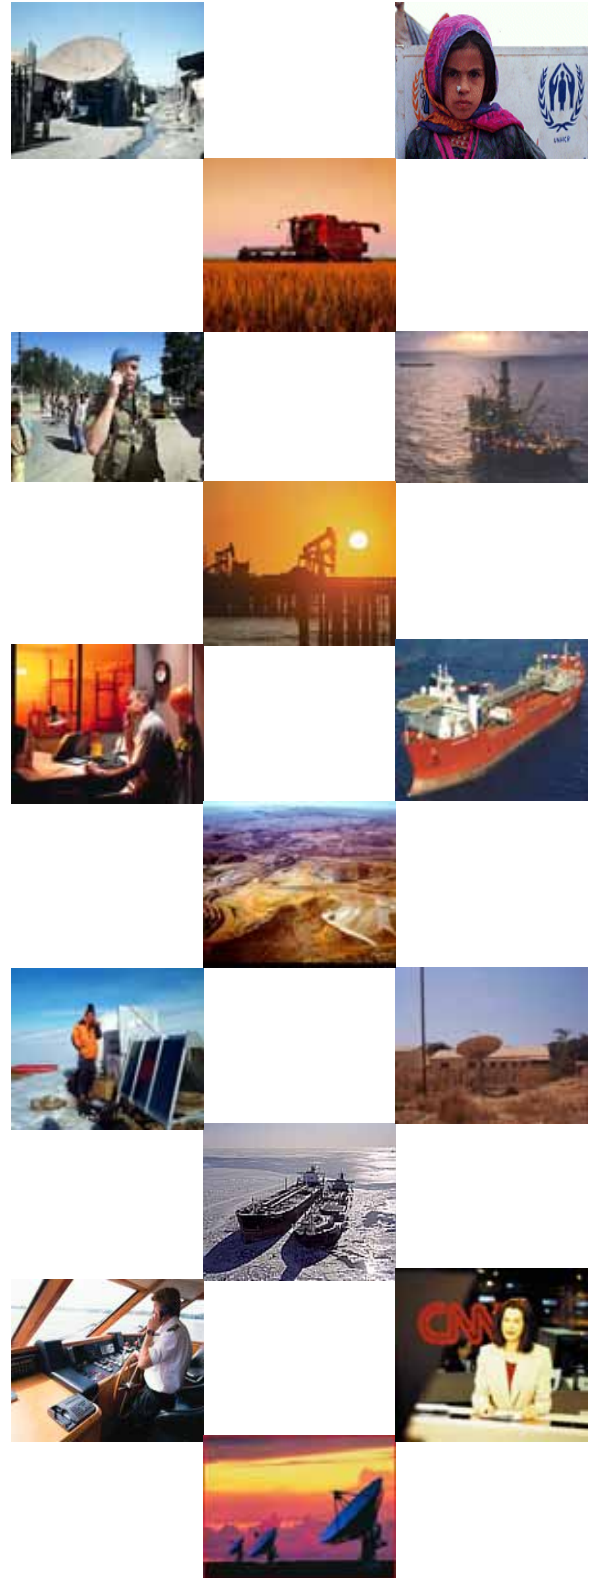

TISC has many years of engineering experience and expertise in satellite and Wireless communications. TISC expertise contains consultancy, tailor made integrated solutions and a complete package of services. VOIP, VPN and corporate network design and implementation is among several added value services provided by TISC.

TISC offers you a global satellite solution anytime anywhere. TISC can be your link to the world if you have to operate in remote area's such as: deserts, mountains, jungles, or if you are at sea. Via strong international strategic partners and sophisticated distribution channels; TISC guarantee an optimal level of service to our customers, worldwide.

"One Stop Shopping" is integrated in all present and future services of TISC. These services comprise: the sale of equipment (portable and fixed), installation, registration, activation, billing, added value service and excellent after sales services. In order to serve our clients to the utmost, TISC is continuously monitoring and adapting new Mobile, Satellite and Wireless technology into its services. This means continuous improvement of all products to the latest standards available on the market today.

TISC satellite services are available in most regions of the world; you can find our customers all over the world. Typical TISC customers could vary from a wide range of branches i.e.: maritime / offshore organizations, oil / gas / mining companies, peace keeping forces, aid / humanitarian organizations, governments, media / news corporations, bank / insurance companies, scientific expeditions, etc.

All our clients have in common that they depend on TISC for reliable and quick means of communications.

TISC PRODUCTS & SERVICES

Inmarsat (BGAN, Fleet, Isatphone)

The Inmarsat system offers truly global wireless communications. It extends the convenience of wireless communications far beyond the coverage of cellular telephone and other wireless communications services. And new services are continuously being developed. TISC was the first company, which introduced the strategy of One Stop Shopping services for Inmarsat. Via Inmarsat ISP (code 9015) the customers can benefit from a complete package of global satellite services. In the Netherlands TISC is one of the six organizations that are recognized by the Ministry of Traffic and Telecommunications as an Accounting Authority (code AA NL 06). In order to add more value to the product; the service has been successfully implemented and integrated, with own designed switches, in several local telecom infra-structures in remote areas. TISC uses the One Stop Shopping principle for the products and services.

Voice & Data Connectivity Anywhere

Iridium

Iridium is the hand held satellite phone that covers the globe. With an Iridium phone, weighing less than one pound, you can stay in contact at sea, up mountains, across deserts or deep in the jungle. Iridium provides coverage in all ocean areas, air routes and landmasses - even in the North and South Poles. This global service is ideal for every use. The military, government, disaster relief and emergency workers, maritime users, the oil gas and mining industry - in short, for all those who need to stay in touch regardless of location.

Communication everywhere

VSAT & Broadband Internet

VSAT stands for Very Small Aperture Terminal and refers to combined send/receive terminals with a typical antenna diameter of 1 to 3.7m. VSAT networks are well suited for business applications, offering solutions for large networks with low or medium traffic. They provide very efficient point-to-multipoint star, or mesh communications, are easy to install, and can be expanded at very low extra cost. VSAT networks offer immediate accessibility and continuous high-quality transmissions. And as they are adapted for any kind of transmission, from data to voice, fax, and video, VSAT networks offer the operational flexibility needed for all information transfers, with very simple installation. TISC is Satellite Service Provider and operates an own Ground Hub Earth

Station (GHES) and several dedicated hubs in Europe offering high quality connection for broadband Internet, Intranet, VPN.

Wireless (GSM, CDMA)

Universal wireless communications are now possible with our Micro GSM or CDMA family of the digital micro cellular wireless base station and switches. A truly unique, stand-alone, transportable platforms designed to deliver an optimized public or private network anywhere you need it. These solutions enable operators to offer low cost services to corporate and commercial customers. The systems can be used in: buildings, manufacturing plants, oil rigs, airports, remote and rural areas.

*Coverage Capacity Connectivity
Cost Effectiveness.... Anywhere in the world*

Wireless (Wifi, Wimax)

Internet and High speed data access is becoming a "must have". Voice, Data and Video over Wireless Broadband is another killer application for rural areas and developing countries Broadband technologies like ADSL and Cable modem are not cost effective or even possible in all geographical areas; wireless Broadband is the ONLY answer. TISC provides a total solutions over wide areas including homes, offices, hotels, recreation parks and other public establishments. These solutions incorporate our LongRange™ radio technology to provide industry best performance.

Simple easy to implement cost effectiveness
